

SEIS 630 Assignment 2

1:

Assume that we build a database based on the solution to assignment1, question 2. Write a SQL statement that prints the balance of accounts and their customer names if the account balance is more than \$10,000.

2: For the bank database given in class, write a SQL statement to print the customer names and the branch names for all branches in where the customer has an account, a loan or both. Don't print the branch name but still print the customer name if the customer does not have a loan or account in the bank.

3: For the bank database given in class, write a SQL statement that prints the name of all cities when there is at least one customer who has an account in one of the city's branches and that branch has more than \$500,000 in assets.
